

# COILED TUBING & PUMPING PUMPING SERVICES

Using some of the industry's most modern pumping units, we offer a full range of fluid pumping equipment to perform a variety of pressure pumping services. Our fleet includes a wide variety of triplex pumps, chemical transfer pumps, centrifugal pumps and a full range of tanks and ancillary items to support operations.

## APPLICATIONS

- Fluid pumping operations
- Scale squeeze and delivery of chemical treatments
- Chemical transfer services
- Both low pressure and high pressure options

## FEATURES

- All diesel and electric powered pumps are soundproofed and built to highest standards
- Split unit design available for weight restricted lifts
- Commonly location bulkhead connections for easy access
- Wide array of tank sizes to suit operational requirements
- Ancillary pumping equipment such as specialist choke manifolds, filter units, mixing and blending equipment also available

## BENEFITS

- Safe position of diesel fill points, reduced working at height
- Larger pumps are containerised with open out doors for maintenance access
- Many tanks incorporate ladders and hand guard rails for safe access

SPECIFICATION	DETAIL
<b>Triplex pumping packages</b>	Zone II units with capacity from 0.1 bbs to 16 bbs / min
<b>Scale inhibition pumps</b>	Zone II diesel driven units for full control with built in hydraulics system for auxiliary equipment
<b>Tanks</b>	Various size fluid tanks from 35 bbs to 250 bbs. Acid tanks also available.
